September 2017 - July 2021

I got back to my home country where I studied Electrical and Electronics Engineering at Nile University. I graduated in 2021 with a Bachelor's degree in Electrical and Electronics Engineering.ββ

PROJECTS

K9JA — Website for advertising dogs for sale

While in school I bred and sold dogs. Then I thought, I just might create a website as a light project. The website utilized HTML, CSS, Javascript for the front-end while NodeJS and Express at the back-end. MongoDB for the database and Cloudinary to store the images used in the website. The final project was deployed using Heroku.

Yelpcamp — Website for posting camps and reviewing them

I took a certified course on Udemy by Colt Steele on Full Web Development and creating this website was a prerequisite for completing the course. The website utilizes HTML CSS and Javascript with Express and NodeJS running the backend. It connected to mongoDB which it used as a database. It also connected to Cloudinary where images uploaded would be saved. Embedded Javascript (EJS), templating, using partials, Bootstrap(CSS and JS library), a couple other node modules and packages for Authentication, Authorisation, Encryption, Validation and a lot of other processes were used. The final project was deployed using Heroku.

SKILLS

Ability to learn and adapt fast.

Programming. (Full Web development - HTML, CSS, Javascript, ReactJS, NodeJS, Express, MongoDB)

Business oriented.

Ability to manage projects.

LANGUAGES

English
